Sierra Vault - Hackathon Video Script (3 Minutes)

Video Structure Overview

- **0:00-0:15** - Hook & Problem Statement

- **0:15-0:45** - Solution Overview & Key Features

- **0:45-1:30** - Live Demo - User Experience

- **1:30-2:15** - Live Demo - Advanced Features

- **2:15-2:45** - Real-World Impact & Use Cases

- **2:45-3:00** - Closing & Call to Action

SCRIPT

[0:00-0:15] HOOK & PROBLEM STATEMENT

Visual: Show home page, then transition to real-world document loss scenarios

Narrator:

"Imagine losing your birth certificate in a fire. Or your degree certificate during a move. For millions of Sierra Leone citizens, losing important documents means months of bureaucracy, lost opportunities, and financial hardship.

Today, we're solving this problem with Sierra Vault - a blockchain-verified digital document vault that ensures your important documents are secure, accessible, and tamper-proof forever."

[0:15-0:45] SOLUTION OVERVIEW & KEY FEATURES

Visual: Show dashboard overview, highlight key features with animations

Narrator:

"Sierra Vault is a comprehensive document management platform built specifically for Sierra Leone citizens. Here's what makes it revolutionary:

First, Blockchain Verification - Every document is cryptographically verified and stored on blockchain, making it impossible to forge or tamper with.

Second, Multi-Role System - We support citizens, government issuers, document requesters, auditors, and administrators - creating a complete ecosystem.

Third, Military-Grade Security - Your documents are encrypted, access-controlled, and only you decide who can see them.

And finally, Always Accessible - Access your documents anytime, anywhere, from any device."

[0:45-1:30] LIVE DEMO - USER EXPERIENCE

Visual: Screen recording of actual app usage

Narrator:

"Let me show you how it works. **First, registration is simple** - just enter your name, email, and National ID Number. [Show registration form]

Once logged in, **the dashboard gives you a complete overview** - total documents, storage used, recent activity. [Show dashboard]

Uploading a document is drag-and-drop simple - just select your file, choose the document type, and it's instantly secured in your vault. [Show upload process]

Viewing documents is seamless - click any document to preview it, see its verification status, blockchain hash, and metadata. [Show document preview]

Sharing is powerful - share documents via secure links or email, with customizable permissions and expiration dates. [Show sharing modal]"

[1:30-2:15] LIVE DEMO - ADVANCED FEATURES

Visual: Show role-based dashboards and advanced features

Narrator:

"But Sierra Vault goes beyond personal storage. **For government institutions**, our issuer dashboard allows them to issue verified documents directly to citizens - birth certificates, degrees, licenses - all blockchain-verified. [Show issuer dashboard]

For document requesters - like employers or universities - they can request documents from citizens, who can approve or deny requests with full transparency. [Show requester dashboard]

For auditors - complete audit trails show every access, modification, and share, ensuring compliance and transparency. [Show auditor dashboard]

And for administrators - comprehensive system management, user management, API key generation, and security monitoring. [Show admin dashboard]

Every action is logged, every document is verified, and every share is tracked - creating a complete, trustworthy ecosystem."

[2:15-2:45] REAL-WORLD IMPACT & USE CASES

Visual: Show statistics, use case scenarios, or testimonials

Narrator:

"The real-world impact is profound. **For students** - never lose your degree certificate again. Apply for jobs instantly by sharing verified credentials.

For property owners - your land deeds are permanently secured and verifiable, preventing fraud and disputes.

For job seekers - share verified qualifications with employers in seconds, not weeks.

For government - reduce fraud, streamline verification, and improve citizen services.

For disaster recovery - when floods or fires destroy physical documents, your digital vault remains intact.

In Sierra Leone, where document loss affects thousands annually, Sierra Vault provides a permanent solution that's accessible, secure, and built for the future."

[2:45-3:00] CLOSING & CALL TO ACTION

Visual: Show app logo, key statistics, and contact information

Narrator:

"Sierra Vault - **Your documents, secured forever.**

Built with Next.js, Node.js, MongoDB, and blockchain verification. Designed for scale, built for security, created for Sierra Leone.

Thank you for watching. Let's secure the future, one document at a time."
